Glucometer Testing Instructions

The Point of Care Glucometer Testing competency is required for all students who will be performing glucose testing in the clinical setting. In addition to completing the module in ACEMAPP, all students must complete a demonstration with their instructor. A demo check-list for Accu-Check competency evaluation is provided for you on the following link: ACCU-CHECK CHECKLIST (This checklist is for your reference and does not need to be mailed back to Clinical Placement).

Once the competency check is complete for each student, the information must be recorded in MLearning. Please use the following instructions to upload the information for each student into MLearning:

RECORDING GLUCOMETER TESTING

Students will not receive barcode strips for performing glucose testing. Instead, students will type their 8 digit UMID number into the glucometer.
